

EXTEND THE VALUE OF YOUR TABLEAU PARTNERSHIP

Up to 80% of a business analyst's time can be consumed by data preparation.

To help their customers reduce the amount of wasted time and make better and faster decisions, Tableau sales representatives, resellers and systems integrators can complement their solutions with Datawatch Monarch.

The world's most widely deployed solution for self-service data preparation, Datawatch Monarch allows users to manipulate, filter, enrich, blend and combine data from disparate sets – in minutes or hours without IT intervention – so it can be visualized in Tableau.

SELL FASTER, MAKE MORE AND BEAT YOUR COMPETITION

Add the proven solution relied on by thousands of users and 93 of the Fortune 100 enterprises worldwide.

- Easily join disparate sources so prospects don't need to struggle with the nuances of blending data
- Deploy projects faster with reusable, automated preparation processes
- Automatically extract clean, accurate and reliable data from 30 sources, including information locked in legacy BI reports, PDFs, text and log files, JSON and more
- Leverage existing IT compliance and governance rules for increased service engagement opportunities that span data retention, auditing and masking
- Export results directly to Tableau's native data format (TDE), as well as other formats including Excel and Qlik, without the need for IT

BECOME A DATAWATCH PARTNER

Team with an agile and flexible vendor partner to present unique product offerings to your customers.

- Enhance and extend Datawatch Monarch with published APIs and SDKs
- Get direct access to a dedicated partner relationship manager and field technical development resources
- Create entrepreneurial go-to-market strategies that fit your business model
- Enjoy the active support of Datawatch marketing for demand generation and customer-facing assets

“Compared to many vendors that are barely past their start-up roots in the self-service analytics world, Datawatch is a 20-year-old data management veteran. The vendor has successfully catered to complex data management challenges at very large clients, and its software has been battle-tested in regulated verticals, such as financial services and healthcare.”
